

PHOTON-OPS

Navigator

Operate the route. Understand the light.

An AI-guided workspace that turns an operator narrative into a verified circuit, real satellite context, fault location, optical margin, impact, and field dispatch.

DOCKER DEMO

EKS PRODUCTION

ENTRA ID

AWS BEDROCK BUILT IN

01

Ask, then verify

Bedrock extracts bounded intent; the network provider verifies the circuit before analysis.

02

See the real route

Overlay ordered plant, assets, and OTDR events on real satellite imagery.

03

Model the light

Carry route distance into Photon Bench for loss, receive power, and engineering headroom.

04

Restore with context

Calculate downstream impact and build a deterministic, circuit-aware field plan.

EXECUTIVE VALUE

One operational source of truth.

Operator intent, provider-verified data, satellite context, and optical assumptions stay attached to the same investigation.

DETERMINISTIC
